Batch B

INPUT:

The screenshot shows an IDE with a dark theme. On the left is the 'EXPLORER' panel showing a project named 'MY_FIRST_PROJECT'. The file tree includes: .dart_tool, .idea, android, build, ios, lib, linux, macos, test, web, windows, .gitignore, .metadata, analysis_options.yaml, my_first_project.iml, pubspec.lock, pubspec.yaml, and README.md. The 'lib' folder is expanded, showing 'main.dart'. The main editor displays the code for 'main.dart' with line numbers 1 through 24. The code imports 'package:flutter/material.dart', defines a 'main' function that calls 'runApp(const MyApp())', and defines a 'MyApp' class that extends 'StatelessWidget'. The 'build' method of 'MyApp' returns a 'MaterialApp' widget with a 'Scaffold' containing an 'AppBar' with the title 'Welcome to Flutter' and a 'Center' widget with a 'Text' widget displaying 'Hello Divesh Punjabi'.

```
lib > main.dart > MyApp > build
1  import 'package:flutter/material.dart';
2
3  Run | Debug | Profile
4  void main() {
5      runApp(const MyApp());
6  }
7
8  class MyApp extends StatelessWidget {
9      const MyApp({Key? key}) : super(key: key);
10
11     @override
12     Widget build(BuildContext context) {
13         return MaterialApp(
14             title: 'Welcome to Flutter',
15             home: Scaffold(
16                 appBar: AppBar(
17                     title: const Text('Welcome to Flutter'),
18                 ), // AppBar
19                 body: const Center(
20                     child: Text('Hello Divesh Punjabi'),
21                 ), // Center
22             ), // Scaffold
23         ); // MaterialApp
24     }
```

Output:

Welcome to Flutter

DEBUG

Hello Divesh Punjabi
